Building website for XXX Inc

Description

Built company's webstore using SuiteCommerce Advanced Kilimanjaro framework and migrated it to latest version SCA 2019.2.

SCA is a framework supported by NetSuite that allows their customers open webstore easily and customize freely.

Employed as a freelancer.

SCA Workings
- Website and Domain setup
- Website configuration
- Item Configuration for their business needs
- Configuration for Item facets search
- Long custom item options
  - ※ NetSuite default item options field allows maximum 4000 character, so if item needs to have long options over its limitation, needs to customize to pass its limitation.
- Payment(Credit, PayPal, Check/Money) item setup
- Tax Item setup
- Delivery method setup
- Shipment method setup
- Implementation for Customer Quote
- Creation customized order forms
- Customization Email, PDF Templates.
- Secure Website

Extra Workings
- Customization Advanced PDF Templates
- Customization Email Templates

Skills

SCA, Node, javascript, css, sass, backbone, gulp, freemarker

Netsuite Integration for XXX Inc

Description

NetSuite allows to open webstore using their own framework – SiteBuilder or SCA, but it needs extra payment and sometimes it is expensive for customer.

So some customer want to create webstore using other frameworks like magento, woocommerce, shopify.

In this case, they need data synchronization between third-party framework and NetSuite including inventory items, sales orders, cash sales, invoices and so on.

There are many integration services for it, but they also need to pay for both setup their modules and maintain its working.

PODS needs to implement data integration without using like-above commercial integration service.

Workings

- Creation integration module on Magento using NetSuite WebServices feature.
- Creation UI Integration preferences.

Skills

NetSuite WebServices, Token-Based API Call, Magento 2, php, SOAP API

※ Technical method for NetSuite integration is to use NetSuite WebServices in general. Some customers might need to implement this function using .Net Framework, not php. I am able to work with both php and .Net and have experience in shopify and woocommerce.

Additional notes

As a netsuite developer as well as freelancer, I have worked with many customers for many companies, sometimes full time and sometimes part-time, and also sometimes for large project, sometimes for small job and solving special issues.

Because of company's privacy, and relationships with my customers or their needs, I can't tell my whole workings to the others.

I think it's enough to explain about my work history and my skills.

I hope to seek your consent that I am unable to provide more detailed information about my workings.
